

# DANILO AND LUCA FOSSATI FOUNDATION

FACTS ABOUT HEALTH

Photo: Village Hospital and Pediatric ward in the Republic of Central Africa.

Our hospitals and health centers are built directly inside problematic environments: suburbs or isolated villages in Africa, in South America or in Asia, etc. Apart from hospitals or health centers, our Foundation is building health centers and infirmaries directly inside the schools that are regularly maintained. This way it assures to young students the complete health support needed by them to become complete achievers (psychic, physical and educational support) and healthy adults. We also support hospitals in Italy.

## Major health centers and projects supported

- Benin-Togo: Rural Laboratory for diagnosis of HIV/AIDS and infectious diseases.
- Brazil (Foz do Iguaçu): Medical equipment for local dispensary.
